

Unit 2: Astronomy

Number of Days: 25

| Unit Focus | Essential Questions | Next Generation Standards | Disciplinary Core Ideas(DCI) |
|--|--|---|---|
| <p>This unit is broken down into three sub-ideas: the universe and its stars, Earth and the solar system, and the history of planet Earth. Students examine the Earth's place in relation to the solar system, the Milky Way galaxy, and the universe. There is a strong emphasis on a systems approach and using models of the solar system to explain the cyclical patterns of eclipses, tides, and seasons. There is also a strong connection to engineering through the instruments and technologies that have allowed us to explore the objects in our solar system and obtain the data that support the theories explaining the formation and evolution of the universe. Students examine geosciences data in order to understand the processes and events in Earth's history. The crosscutting concepts of patterns, scale, proportion, and quantity and systems and systems models provide a framework for understanding the disciplinary core</p> | <ul style="list-style-type: none">• What are Celestial bodies?• What holds our galaxy and solar system together?• How does gravity cause the movements in space and on Earth including the seasons? | <ul style="list-style-type: none">• MS-ESS1-1• MS-ESS1-2• MS-ESS1-3. | <ul style="list-style-type: none">• <u>ESS1.A: The Universe and Its Stars</u>• <u>ESS1.B: Earth and the Solar System</u> |

Cite specific textual evidence to support analysis of science and technical texts. (MS-ESS1-3) **RST.6-8.1**

Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flowchart, diagram, model, graph, or table). (MS-ESS1-3) **RST.6-8.7**

Integrate multimedia and visual displays into presentations to clarify information, strengthen claims and evidence, and add interest. (MS-ESS1-1), (MS-ESS1-2) **SL.8.5**

Reason abstractly and quantitatively. (MS-ESS1-3) **MP.2**

Model with mathematics. (MS-ESS1-1),(MS-ESS1-2) **MP.4**

Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. (MS-ESS1-1),(MS-ESS1-2),(MS-ESS1-3) **6.RP.A.1**

Recognize and represent proportional relationships between quantities. (MS-ESS1-1),(MS-ESS1-2),(MS-ESS1-3) **7.RP.A.2**

Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set. (MS-ESS1-2) **6.EE.B.6**

Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities. (MS-ESS1-2) **7.EE.B.6**

Unit 2: Astronomy

Approximate Days: # 25

Standard(s):

- **MS-ESS1-1** Patterns of the apparent motion of the sun, the moon, and stars in the sky can be observed, described, predicted, and explained with models.
- **MS-ESS1-2** Earth and its solar system are part of the Milky Way galaxy, which is one of many galaxies in the universe.
- **MS-ESS1-3.** The solar system consists of the sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the sun by its gravitational pull on them.
